LIVES

Saving LIVES. Maximizing safety is our mission. From set-up to take-down this system empower your employees to make the safest decision every time.

TIME

Saving TIME by prioritizing practicality. The Traffic Pro Bed system is always one step ahead of the set-up.

MONEY

Saving MONEY. This truck bed pays for itself in under two years. This is the best system for your bottom line.

BASE SAFETY

Safety starts here. Start employee safety on the right path. This model positions employees safely in the truck bed, just behind the cab, into their OSHA compliant ESU with safety restraint system.

FULL TRAFFIC

Equipped for lots of signage. Maximize sign storage and organization, always keeping all devices safely accessible from either ESU. This model can be used to set-up several small to midsized operations at a time.

HALF STAKE

This hybrid combines the best of the Full Traffic and Full Stake model. Optimized storage allows for bigger and more equipment while maintaining our practical safety system.

FULL STAKE

This configuration is well equipped to support diverse and large scale highway jobs and services requiring big devices and even temporary equipment rigs (such as a spray rigs).

OPTIONS

EMPLOYEE SAFETY UNIT (ESU)

The ESU with OSHA-compliant safety restraint is crucial for maximizing practical safety and security in a work zone, ultimately **saving** the **LIVES** of your employees before they are at risk.

SIGN AND STAND BOX

Save TIME by optimizing equipment access and organization without cutting employee safety. This design keeps equipment secured, and central to the ESUs where it's safely accessible.

CONE DRIVE SYSTEM

One driver, one deployer, and the push of a button are all it takes to set up and take down a work zone. Instantly increase safety, optimize crew capacity, cut time, and **save MONEY**.
